SUMMARY

Senior AI and platform engineer with 5+ years building production LLM applications, distributed APIs, and cloud infrastructure across Oracle Health and Microsoft Azure. Ships agentic and RAG systems for regulated healthcare alongside services handling millions of requests per day.

SKILLS

AI & LLM: OpenAI & Claude APIs, RAG, Agent Workflows, MCP, Prompt Chaining, Human-in-the-Loop Systems, MLflow LLM Evaluation

Infra: Azure, OCI, Vercel, Kubernetes, Terraform, CI/CD, Object Storage, Vault, NoSQL, Postgres, Queues, Functions

Languages Java, TypeScript, C#, Python, SQL

Frameworks Next.js, React, React Native, Open AI Agent SDK, Vercel AI SDK, MLFlow

Other Spanish (Fluent)

EXPERIENCE

Oracle

Charlotte, NC (remote)

Senior Member of Technical Staff, Oracle Health and AI Pharmacies

Apr 2025 – Present

- Built internal-production LLM agents for 60 pharmaceutical researchers, processing ~300 DailyMed SPL documents/month and reducing first-draft creation from ~8 hours to 2 minutes.
- Built a RAG prototype used by researchers to query source documents in natural language during review.
- Architected containerized Kubernetes-deployed services using Terraform, OCI GenAI, Object Storage, Vault, key-value storage, and managed workflows; owned infrastructure and application releases.
- Establishing MLflow-based LLM-as-judge evaluation patterns for quality measurement and regression testing.

Microsoft

Redmond, WA (hybrid)

Software Engineer II, Copilot Studio

Jun 2024 – Mar 2025

- Implemented slot filling for AI Plugins, using conversation context to construct valid connector requests — a core capability for multi-turn agent flows.
- Led cross-team initiative that reduced active Customer Reported Incidents by 20% and established triage processes adopted across the org.

Software Engineer II → Software Engineer, Azure Cost Management

May 2021 – Jun 2024

- Owned synchronous Azure Cost Management APIs handling up to 5M requests/day and designed an async path with Durable Functions and Blob Storage for major customers exceeding synchronous limits.
- Built job-queuing services with Azure Functions and Service Bus.
- Migrated SQL-based shard routing to a microservice architecture.
- Led shared authorization and rate-limiting packages adopted by 15 services handling tens of millions of requests/day.
- Automated deployments across test, canary, and multi-tenant production.

Software Engineer Intern — Azure Cost Management, Azure Marketplace, Windows

2018 – 2020

PROJECTS

- BNDR** — Shipped a social iOS app end-to-end; built the MVP with Next.js/Supabase, migrated to React Native, integrated RevenueCat and AdMob, and published to the App Store.
- Paul-AI** — Next.js/Vercel GroupMe agent serving a 100-person community; parses natural-language RSVPs, tracks attendance, and automates weekly roster confirmations.
- SMB Platforms** — Built Cape Epoxy's custom CRM with Gmail Pub/Sub agents for inbox monitoring, response drafting, and workflow updates; also shipped a booking and admin platform for a local car detailer.

CERTIFICATIONS

Anthropic: Building with the Claude API (Apr 2026) • Claude Code in Action (Mar 2026) • Claude 101 (Mar 2026)

EDUCATION

Virginia Polytechnic Institute and State University

Blacksburg, VA

B.A. Spanish — Minors in Computer Science and Mathematics

Aug 2016 – May 2021
